> learn crypto --lesson 2/100

What a blockchain is, in plain words._

crypto from zero

lesson 2 of 100

[fact]

start with a notebook.

an ajo group keeps one book:
who paid, how much, when

problem: one person holds it
└── they can change it

[fact]

now give everyone a copy.

thousands of computers
each hold the same book

change your copy?
└── everyone else disagrees

no single owner, no single point to cheat.

[fact]

pages are blocks. linked, they form a chain.

[page 1] ← [page 2] ← [page 3]

each page carries a fingerprint
of the page before it.

edit an old page →
every page after it breaks

[fact]

who writes the next page?

bitcoin: miners compete
  using computing power

ethereum: validators
  who lock up coins as a deposit

cheating costs them money

> homework --2min

your 2-minute task

explain a blockchain to a friend using only the notebook example.

if they get it, you do too.
