> guide ai --cv

Use AI to write a CV that gets interviews._

4 steps, any AI chat tool

chatgpt, claude or gemini

[thesis]

don't type "write my CV".

you'll get a generic CV that sounds like everyone else's.

give it the job ad + your real experience instead.

[fact]

step 1: the prompt.

"here is the job ad and my experience. rewrite my bullet points for this role. use numbers. do not invent anything."

[fact]

step 2: duties → results.

before: managed social media

after: grew instagram from
2k to 9k in 6 months

ask: what did it change?

example numbers. use your own.

[fact]

step 3: beat the robot filter.

many companies scan CVs with software first.

ask the AI: "which keywords from the job ad are missing from my CV?"

[thesis]

step 4: you have the final say.

read every line out loud.
is it true? does it sound
like you?

AI drafts. you decide.
