> guide crypto --wallets

Which crypto wallet should you use?_

a plain-english guide

works in any country

[fact]

two kinds of wallet.

custodial the exchange holds your keys. like a bank.

self-custody you hold the keys. like cash in your own safe.

[thesis]

which one, when?

small amounts, still learning
  → a regulated exchange

holding long-term
  → your own wallet

[fact]

hot vs cold.

hot	phone/browser app
	online, easy to use
cold	hardware device
	offline, hardest to hack

[fact]

set it up safely.

01 download from the official site

02 recovery phrase on paper
never a screenshot or cloud

03 send a test amount first

[fact]

the 3 mistakes that cost the most.

01 wrong network: same coin, different chain = lost

02 fake wallet apps

03 "sync your wallet" sites asking for your phrase
